Warren James Store Re-fit

Warren James jewellery store within the Broadmarsh shopping centre has undergone a major shop re-fit. Midlands Asbestos Solutions were contracted by Craig Foster Architects to carry out an asbestos survey and then the subsequent asbestos removal works which had been identified within the ceiling void of the shop.

With the premises being in the middle of a major shopping centre, works had to be conducted out of hours and under tight security. Midlands Asbestos Solutions designed the specification for the external security hoarding of the shop to stop any un-authorised personnel entering the working area during the day.

The asbestos works were carried out over 5 days and finished within schedule and budget. Director Darren Skinner & manager Jay Blake carried out a routine internal audit during the works which was a success.
