

# GF Tomlinson Window Replacement

Littleover Community College

## GF Tomlinson Window Replacement Project- Littleover Community College

Over at Littleover Community College there was ongoing maintenance and upgrade works. Midlands Asbestos Solutions successfully won the contract for the asbestos removal works for the window replacement project to block M of the college.

Midlands Asbestos Solutions were sub-contracted by GF Tomlinson Building to carry out the asbestos remedial work during the summer holidays working alongside the window company to ensure the project did not fall behind schedule, which was completed 1 day ahead of our completion date.

The project consisted of the removal of 71 external AIB window panels to low and high level around block M ready for the new window frame to be fitted. During this project Midlands Asbestos Solutions welcomed a new operative to the team, Paul. Paul worked alongside one of our experienced operatives throughout this project as part of his ongoing training.

This project was successfully completed in the timescale provided and within budget.
